1. General Features

- Built-in QFN40 GD32VW553 chip, RISC-V 32-bit processor up to 160 MHz
- Built-in 4096 KB on-chip Flash memory and 320KB (288 KB + 32KB Shared) SRAM memory
- 802.11b/g/n/ax compatible
- 802.11i (WPA, WPA2, WPA3). Open, shared key, and pair-wise key authentication services
- Single antenna 1x1 stream in 20MHz-bandwidth channels
- Support of 802.11ax MCS up to MCS9 with a Max PHY rate of 114.7Mbps
- Bluetooth LE 5.2
- Support of BLE High-Speed 2M PHY and Long-Range modes (125 kbps, 500 kbps).
- Peripheral interfaces: 18 GPIOs, support of ADC, PWM, UART, I2C, SPI
- Onboard PCB antenna for GD32VW553-UNIFI-IMHx, and external IPEX connector for the GD32VW553-UNIFI-EMHx
- Operating voltage: 3.0V ~ 3.6V
- Operating temperature: -40 ~ 85°C for grade 6 and -40 ~ 105°C for grade 7

2. General description

The GD32VW553-UNIFI series modules are highly integrated 2.4GHz Wi-Fi and BLE modules, they are optimized modules designed for a broad array of smart devices for Internet of Things (IoT) applications especially in areas such as industrial control, motor drives, user interface, power monitor and alarm systems, consumer and handheld equipment, gaming and GPS, E-bike, optical module and so on.

The GD32VW553-UNIFI series modules are currently available in four types, based on different antenna type and operating temperature.

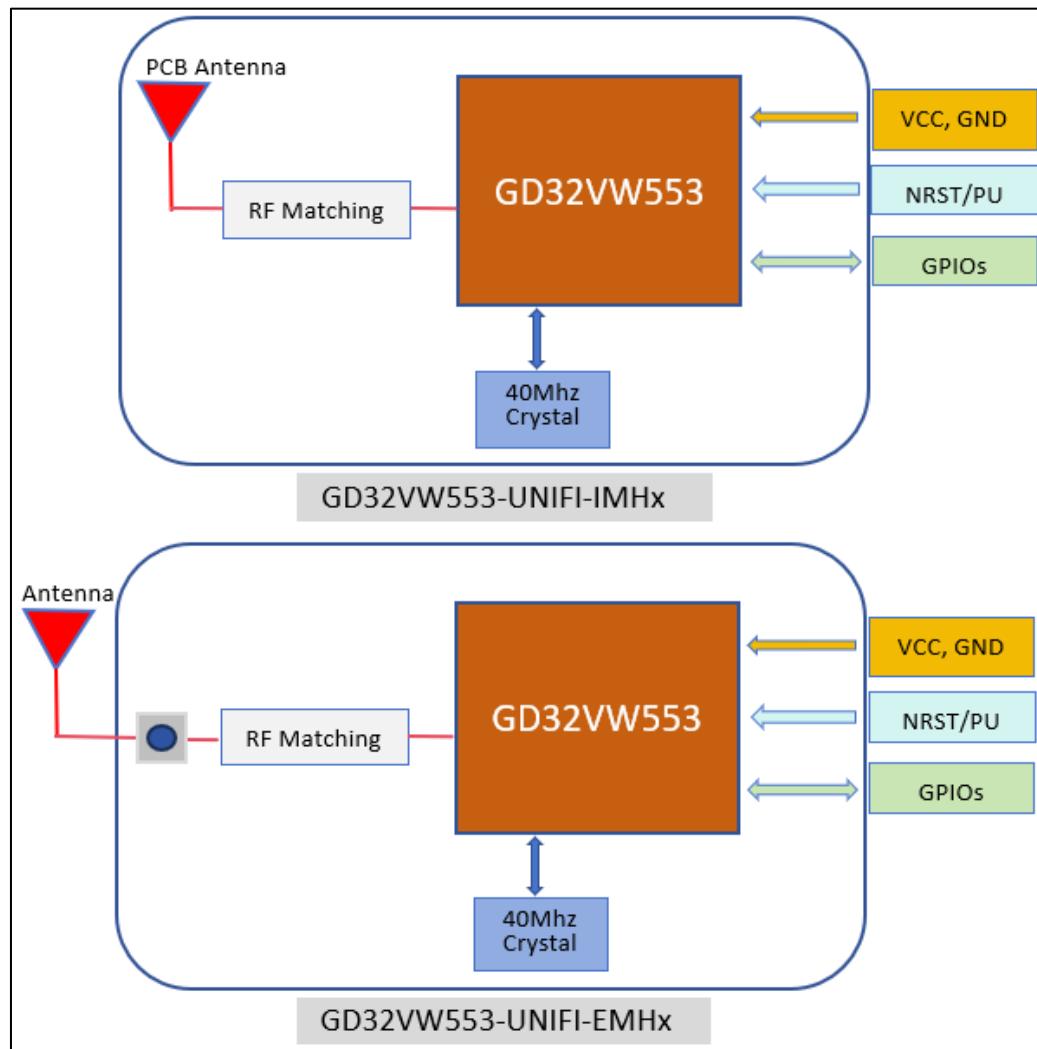

Table 2-1. Description of module types

Module Part Number	Flash	Operating Temperature	Antenna Type	Module Size(mm)
GD32VW553-UNIFI-IMH6	4MB	-40 ~ 85°C	Onboard	24 x 16 x 2.2
GD32VW553-UNIFI-IMH7		-40 ~ 105°C	Onboard	
GD32VW553-UNIFI-EMH6		-40 ~ 85°C	External	
GD32VW553-UNIFI-EMH7		-40 ~ 105°C	External	

3. Block diagram

An onboard PCB antenna is used for GD32VW553-UNIFI-IMHx, while an external antenna with an IPEX connector is used for GD32VW553-UNIFI-EMHx.

8. Module Schematic

Below figure shows the circuit diagram of the internal components of the module GD32VW553-UNIFI-IMHx. For GD32VW553-UNIFI-EMHx, An Ipx connector will be placed in position J3, and the OR resistor in position R3 will be changed into position R4.

Figure 8-1. Module Schematic

9. Peripheral circuit reference design

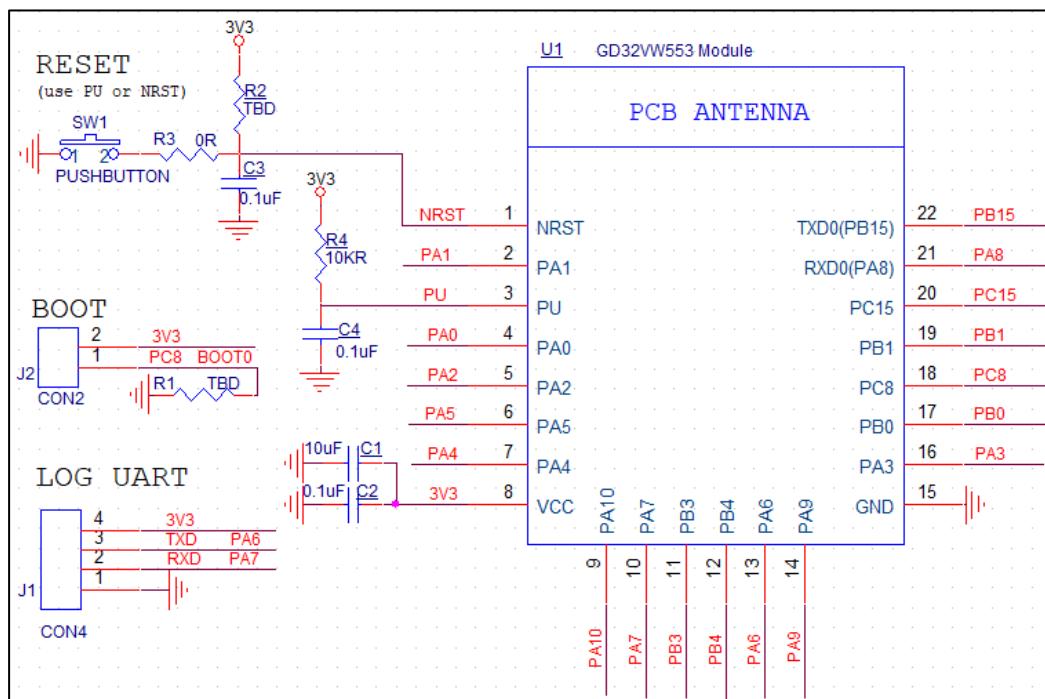

Module pins PU and NRST are the power supply enable and reset pins respectively. The chip can operate only when both pins are pulled up. A 0.1uF filter capacitor and a 10K Ohm pull-up resistor have been placed on the module for NRST pin only. If the GD32VW553 is used as a master MCU, it is recommended to use NRST as the enable pin with PU always pulled up on the motherboard. If the GD32VW553 is used as a slave device, it is recommended to use PU as the enable pin, and no more circuit is needed for NRST.

The Uart pins(PA6/PA7) are recommended to be connected out, which support functions of basic commands, log output and Uart download. Besides, if AT commands are needed, another pair of Uart pins(PB15/PA8) should be connected out as well.

For normal startup, GD32VW553 needs to be booted from flash, therefore pin BOOT0 needs to be pulled down before PU/NRST power on. For Uart download mode, BOOT0 needs to be pulled up before PU/NRST power on.

The power supply for VCC pin must provide a minimum of 500mA, and it is recommended to place a 10uF and a 0.1uF capacitor near this pin.

Figure 9-1. Reference design

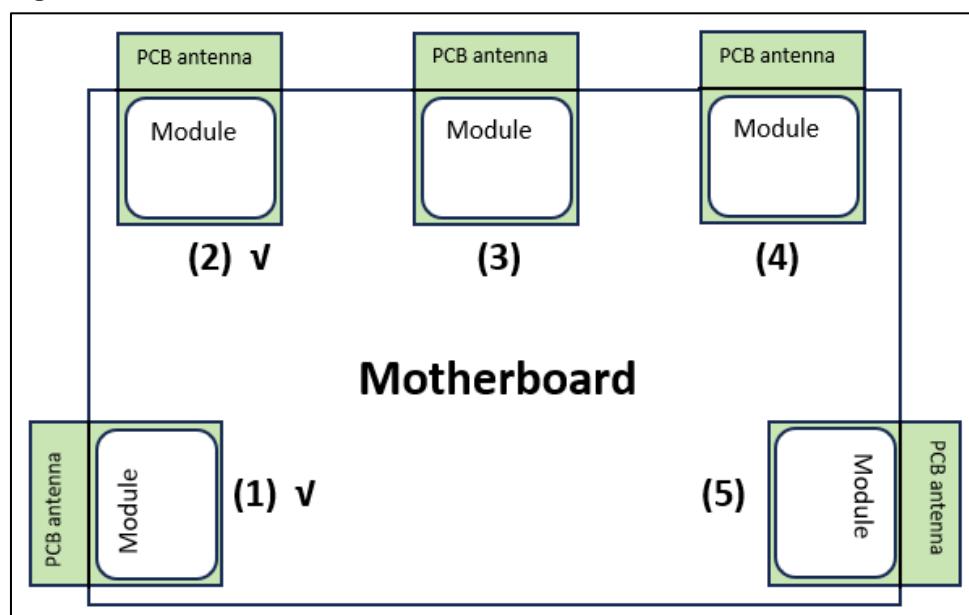

10. Requirements for antenna placement

If using the onboard PCB antenna, the antenna area of the module needs to extend away from the motherboard. The distance between the PCB of the motherboard and other metal devices must have a minimum clearance of 15mm. The area below and above the onboard antenna area is required to be kept away from metal devices, sensors, interference sources, and other materials that may cause signal interference.

The recommended placement of the module is shown below.

Figure 10-1. Recommended Placement

13. Moisture sensitivity

The Module is a level 3 Moisture Sensitive Device, by the standard IPC/JEDEC J-STD-020. Special care must be provided to adhere to all of the requirements for using this class of component. Furthermore, the customer must allow for the following conditions:

- a) Calculated shelf life in sealed bag: 12 months at <40°C and <90% relative humidity (RH)
- b) Environmental condition during the production: 30°C / 60% RH according to IPC/JEDEC J-STD-033A paragraph 5
- c) The maximum time between the opening of the sealed bag and the reflow process allowed is 168 hours if "IPC/JEDEC J-STD-033A paragraph 5.2" is respected
- d) Baking is required if either conditions b) or c) are not respected
- e) Baking is required if the humidity indicator inside the bag indicates 10% RH or more
